

Drum pumps

Take out what's in.

**as easy as blinking,
innovative, simply perfect**

grün-pumps need no further explanation

We fulfil the expectations of our customers
with innovation and perfection.

If we are not immediately successful,
your problem becomes the problem of the managing director.

**Start up with grün-pumpen,
and you will advance.**

Dr. Thomas Sigel, managing director

**Selection of
a Drum pump:**

A drum pump always consists of
a pump tube and a drive motor.

1. Select a suitable pump tube material
after referring to the chemical resi-
stance table. From that you can also
find out if an explosion proof drum
pump is necessary or not.
2. Choose the right pump tube/motor
combination from the performance
curves in this catalogue.
3. Note down the type and order
number.
4. Select the necessary accessories
(page 28-34) and note down the order
number.
5. Take the prices out of the price list.

Advantages of grün-drum pumps

- **no inner-tube**
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

A

Advantages
of grün-
drum
pumps

- **multistage design**
- therefore lower speed,
less wear, less noise
and longer life
- more stages possible,
gives more pressure
- also **with feed-screw**
for medium viscosity liquids

Our Novum !

- **magnetic clutch**
- hermetically sealed
- for gaseous and
dangerous liquids
- no leakage

- **quick release coupling**
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive
environments

Pump tubes

The pump tubes are available in different materials: PP, PVDF, stainless steel and Hastelloy C. All these pump tubes have an easily accessible drive shaft (2). In the top section the solid shaft is sealed with a robust mechanical seal (4) directly under a

tandem ball-bearing. The coupling (7) above connects the motor drive shaft with the pump tube drive shaft. The coupling (6) which connects to the motor, is made of stainless steel. In the bottom section of the pump tube there is the pumping element

(3) directly under a slide bearing (5). These pumping elements are available in three different versions, selection is dependent on the liquid or the application.

Version A with axial impeller

The axial impeller is designed to give a high delivery rate. It should be used when a fast liquid transfer is necessary.

Version R with radial impeller

The 3 stage radial impeller design is able to reach a high delivery head. With the addition of further stages the delivery head can be greatly increased, or the speed of the drive motor can be reduced down to 2.800 rpm.

Version S with feed screw

The feed screw is mainly used for viscous liquids. This pump tube can operate with a high speed or a low speed motor. Smooth pumping of the liquid is guaranteed.

**TABLE OF MATERIALS
PUMP TUBES**

designation	pump tube PP	pump tube PVDF	pump tube SS	pump tube HC
1 tube	PP	PVDF	SS	HC
2 drive shaft	SS,HC	HC	SS	HC
3 axial impeller	PP	ETFE	ETFE	ETFE
3 radial impeller	PP	ETFE	ETFE	ETFE

4 mechanical seal	ceramic carbon, FPM	ceramic carbon, FPM	ceramic carbon, FPM	ceramic carbon, FPM
5 slide bearing	PTFE mod.	PTFE mod.	carbon	carbon
6 coupling piece	SS	SS	SS	SS
7 coupling	PA	PA	PA	PA

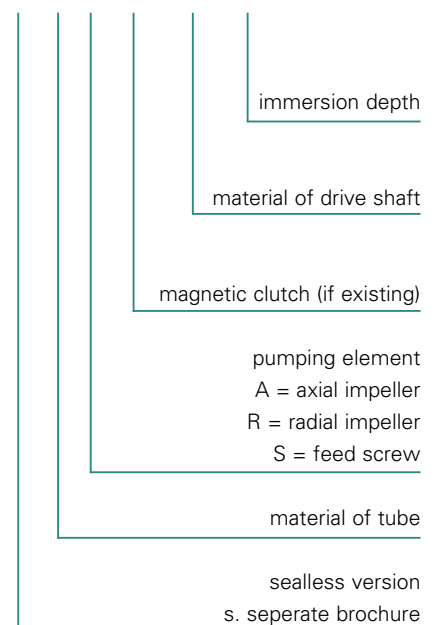

PP = Polypropylene
PVDF = Polyvinylidene fluoride
PA = Polyamide

SS = Stainless steel 1.4571
HC = Hastelloy C4
PTFE = modified Polytetrafluorethylene

All detailed pump tubes are also available in sealless version (SL)

Pump tube designation

(SL)-PP-A-(Mag)-SS-1000

Pump tube with magnetic clutch

Each pump tube can be equipped with a magnetic clutch. In this way the mechanical seal is not necessary. The magnetic power will be transmitted through the isolations-

hell made of chemically- and wear-resistant PVDF resulting in a sealless pump tube, hermetically sealed against the atmosphere.

SmCo = samarium-cobalt-magnet

B

Pump tubes overview

Pump tubes for complete drum emptying

- nearly complete drainage
- residual quantity < 0,1 litre
- manual operated foot valve

This pump tube is equipped with a foot valve, which avoids liquid runback. Using a lever above the hose connector, the foot valve can be opened or closed manually. During pumping and when the drum becomes empty, close the foot valve whilst the motor is still running (picture left). After switching off the motor, the pump tube complete with the trapped liquid can be removed and inserted into the next drum. The foot valve can now be opened with the drum pump ready for continued pumping.

For additional information see p.22/23.

Mixing pump tube

- mixing and pumping in one unit
- homogeneous mixing
- powerful pumping

Emulsions, dispersions or suspensions such as paints and laquers tend to separate when left to stand. The heavier particles sink down to the bottom. The lighter parts will float to the top. Before discharging, the liquid has to be remixed, e. g. in a 200 litre drum with an opening perhaps only 50 mm diameter. This is no easy task. With our mixing drum pump this problem can easily be overcome. To mix, simply set the lever on the pump tube to mix. After the liquid has been mixed, you can gradually move the lever to pump in order to discharge the homogeneous liquid. Additional information see page 24/25.

A mixing pump tube in stainless steel can also be used for inflammable liquids (see page 26/27).

mixing

pumping

Drive motors

Universal motors p310 and p400

new+innovativ: magnetic clutch, speed reducer

These are robust and powerful commutator motors. With a speed of only 8.500 rpm they have a higher resistance to wear and a longer durability as faster running motors. Also, the lower speed has a positive effect on the noise level.

The motor housing is manufactured from chemically resistant polypropylene, which withstands extremely corrosive environments and demanding day-to-day use.

The quick release coupling that connects the motor and pump tube guarantees a speedy connection or disconnection. This is extremely important if there are many different pump tubes and only one drive motor in use.

- with bipolar on/off switch and singlepole thermal overcurrent release, 5 m cable.
- double insulated, VDE approved, splash water protected (IP 24) and interference suppressed.
- optional with a low voltage release (LVR) to prevent an unintentional starting up after a power failure or when plugging into the power supply.
- SR: optional with speed reducer
- MA: optional totally enclosed fan cooled

Explosion proof universal motor Ex700

This is a robust and powerful commutator motor. With a speed of only 8.000 rpm there is a higher resistance to wear and a longer durability than with faster running motors. The lower speed also has a positive effect on reducing the noise level. Explosion proof according protection class ATEX, Ex II 2G EEx de IIC T5, enclosed in a compression-proof, encapsulated inner housing made of aluminium. The outer housing is made of an impactresistant, antistatic synthetic material, making it more resistant to mechanical stress and electrostatic discharge. The quick release coupling being the connecting piece between motor and pump tube guarantees a speedy connection or disconnection. This is extremely important if there are many different pump tubes and only one

drive motor in use.

- explosion proof ATEX, Ex II 2G EEx de IIC T5.
- with bipolar on/off switch and single-pole thermal overcurrent release.
- With low voltage release to prevent an unintentional starting up after a power failure or when plugging into the power supply.
- complete with 5 m cable and in 230 volt version with a **non-explosion proof earthed plug**.

This plug is only for outside explosion-hazard areas. Inside the hazardous location an explosion proof plug together with an explosion proof socket must be used (see page 30/31).

Three-phase-motor pd500

This standardized three-phase-motor with a speed of 2.800 rpm will be used with **multistage pump tubes** and **feed screw pump tubes**. The very low speed for a drum pump ensures a long durability, a lower noise level and suitable for continuous operation.

The quick release coupling that connects the motor and pump tube guarantees a speedy connection or disconnection. This is extremely important when there are many different pump tubes for one motor, or to separate due to the weight.

- three-phase current 230/400 V, 50 Hz, protection class IP 55.
- single-phase current 230 V, 50 Hz, with capacitor.
- other voltages and other models possible.
- in explosion proof (ATEX) and non-explosion proof version.
- non-explosion proof motor with on/off protection switch.
- explosion proof motor with cable terminal box.

B

Drive motors overview

Compressed air motor d600*

This is a safe, robust and versatile drive motor. In combination with a pump tube of ATEX category 1/2 made of stainless steel or HC it can be used in an explosion-hazard area (see page 26/27). The housing is made of aluminium with an acid proof paint finish. The quick release coupling that connects the motor and pump tube guarantees a speedy connection or disconnection. This is extremely important when there are many different pump tubes and only one motor.

- simple speed regulation with air pressure or air valve.
- 3 – 7 bar operating pressure.
- no problem with overload.
- with muffler.
- exhaust can be drained off through a separate hose.
- ATEX-Certification

Drum pumps in PP

(sealless version see separate brochure)

Product profile

A drum pump always consists of a pump tube and a drive motor. They are connected by a quick release coupling. All pump tubes can be combined with all motors.

For drum pump accessories see pages 28-34.

Advantages

- **no inner-tube**
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

- **magnetic clutch**
- hermetically sealed
- for gaseous and dangerous liquids
- no leakage

- **multistage design**
- therefore lower speed, less wear, lower noise and longer life
- more stages possible, gives more pressure
- also **with feed-screw** for medium viscosity liquids

- **quick release coupling**
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive environments

Applications

The drum pumps in PP are mainly used for pumping aggressive liquids like acids, caustics and other thin, low viscosity liquids.

Because of the ease of access to the shaft, the pump tube can be cleaned easily and quickly particularly with adhesive liquids.

Specially suitable for:

acids, caustics, thin-bodied oils, vegetable oils, fruit-juices, milk, paints, galvanic liquids, waste water and many others.

- no leakage

- **multistage design**
- therefore lower speed, less wear, lower noise and longer life
- more stages possible, gives more pressure
- also **with feed-screw** for medium viscosity liquids

- **quick release coupling**
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive environments

Applications

The drum pumps in PVDF are mainly used for pumping highly aggressive liquids like concentrated acids and caustics and other thin, low viscosity liquids.

Because of the ease of access to the shaft the pump tube can be cleaned easily and quickly particularly with adhesive liquids.

Specially suitable for: concentrated acids and caustics, chromic acid, nitric acid, fluoric acid and other heated acids and caustic liquids (see resistance table).

Drum pumps in PVDF

CHAR. CURVES A

CHAR. CURVES R

Important:

- These drum pumps are not explosion-proof.
- Do not pump inflammable liquids.
- For explosion-proof drum pumps see pages 26 and 27.

Notes:

Drum pumps in stainless steel (SS) and Hastelloy (HC)

(sealless version see separate brochure)

Product profile

A drum pump always consists of a pump tube and a drive motor. They are connected by a quick release coupling. All pump tubes can be combined with all motors.

For drum pump accessories see pages 28-34.

Advantages

- no inner-tube
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

- magnetic clutch
- hermetically sealed
- for gaseous and dangerous liquids
- no leakage

- multistage design
- therefore lower speed, less wear, lower noise and longer life
- more stages possible, gives more pressure
- also with feed-screw for medium viscosity liquids

- quick release coupling
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive environments

Applications

The drum pumps in **SS** without explosion proof motor are mainly used for pumping aggressive liquids like acids, caustics and other thin, low viscosity liquids. Specially suitable for: acids, alkalis, thin-bodied oils, vegetable oils, fruit-juices, milk, paints, inks and many others (see resistance table).

The drum pumps in **HC** without explosion proof motor are mainly used for pumping highly aggressive liquids (see resistance table).

Because of the ease of access to the shaft the pump tube can be cleaned easily and quickly particularly with adhesive liquids. Metal drum pumps have the advantage of being more rugged and robust than plastic pumps.

CHAR. CURVES A

CHAR. CURVES R

Important:

- These combinations of pump tubes and drive motors are nonlicensed for hazardous locations.
- For application in hazardous locations you must use an explosion proof pump tube and an explosive proof drive motor.
- For explosion-proof drum pumps see pages 26 and 27.

Notes:

Multistage drum pumps in stainless steel and PP

Product profile

A drum pump always consists of a pump tube and a drive motor. They will be connected by a quick release coupling. All pump tubes can be combined with all motors. Multistage pump tubes consists of several impellers in a row. For drum pump accessories see pages 28 – 34.

Advantages

- **no inner-tube**
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

- **multistage design**
- therefore lower speed, less wear, lower noise and longer life
- more stages possible, gives more pressure

LVR = low voltage release, other voltages see page 8

Applications

The multistage pump tube fitted with a **three-phase-motor** should be used where **continuous operation** and/or a **low noise level** is required.

When fitted with a **universal motor** or a **compressed air motor** it should be used when a **high delivery head** is necessary.

Because of the ease of access to the shaft the pump tube can be cleaned easily and quickly particularly with adhesive liquids.

For chemical resistance of these pumps see separate resistance table.

Notes:

Feed-screw drum pumps in stainless steel and PP

(sealless version see separate brochure)

Product profile

A drum pump always consists of a pump tube and a drive motor. They are connected by a quick release coupling. All pump tubes can be combined with all motors.

The feed-screw drum pump has a feed-screw pumping-element, rather than impellers. For drum pump accessories see pages 28-34.

Advantages

- no inner-tube
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

- with feed-screw
- for medium-viscous liquids
- smooth pumping of liquids
- low noise level with three-phase motor
- high performance with universal motor

- quick release coupling
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive environments

LVR = low voltage release, other voltages see page 8

Applications

The feed-screw drum pump is used for the smooth pumping of medium-viscosity liquids. They can be operated with a low-speed three-phase motor or a high-speed universal motor, according to the pumping requirements.

Because of the ease of access to the shaft the pump tube can be cleaned easily and quickly particularly with adhesive liquids. Specially suitable for paints, lacquers, mineral oils, vegetable oils, foods, cosmetics and many other products.

retrofit kit for magnetic clutch

order-no. 760-0050,
 LVR = low voltage release,
 other voltages see page 8

Applications

The mixing drum pump should be used for emulsions, dispersions or suspensions such as paints and lacquers. These liquids tend to separate when left to stand. With the mixing drum pump these liquids can first be mixed and then pumped with a single unit.

The pump tube in SS combined with an explosion-proof motor can be used for inflammable liquids (see page 26/27).

For chemical resistance of these pumps refer to the resistance table.

C

Mixing drum pumps in stainless steel and PP

Important:

- These drum pumps are not explosion-proof.
- Do not pump inflammable liquids.
- For explosion-proof drum pumps see pages 26 and 27.

Notes:

Explosion-proof drum pumps in SS and HC

(sealless version
see separate brochure)

Product profile

An explosion-proof drum pump always consists of a pump tube made of stainless steel or Hastelloy C of ATEX category 1/2 (licensed for „Zone 0“) and an explosion-proof drive motor of ATEX category 2 (licensed for „Zone 1“) according to IEC and VbF standards. Modern compressed air motors comply with the requirements of ATEX category 2 and can also be used inside a hazardous area. They are connected by a quick release coupling. All pump tubes can be combined with all motors.

Advantages

- no inner-tube
- easily accessible shaft
- easy to clean
- solid shaft
- robust mechanical seal

- multistage design
- therefore lower speed, less wear, lower noise and longer life
- more stages possible, gives more pressure

- quick release coupling
- speedy connection
- only 1/4 turn
- robust design
- rugged bow-gear coupling
- suitable for aggressive environments

Applications

Explosion-proof drum pumps should be used for pumping inflammable liquids according to VbF or when an explosion-proof drum pump is specified.

Explosion-proof mixing drum pumps should be used for inflammable emulsions, dispersions or suspensions like paints and lacquers when mixing before pumping is necessary. When working with explosion-proof drum pumps, the **accessories** detailed on pages 30 and 31 should be used. For chemical resistance of these pumps refer to the resistance table.

Accessories

Emission proof drum adapter ESA

The emission proof drum adapter ESA, locks the pump tube in the drum opening and seals the opening around the tube. ESA prevents gas from leaking out of the drum opening into the environment. To avoid a vacuum, generated when pumping the liquid out of the drum, ESA has a valve, which allows air outside to enter the drum when a low pressure is created. If no liquid is pumped from the drum, then the valve remains closed and keep the gas inside the drum. ESA is available in different materials for all pump tubes with tube diameter 40 mm.

840-0096
840-0097

Gas displacement system GPA

The drum adapter with gas displacement system GPA secures the pump tube in the drum opening and also seals the opening around the pump tube. The GPA allows the exchange of gas via a small hose between the container to be emptied and the container to be filled. The gas volume displaced by filling the container may flow back into the container where the liquid is pumped out. With the GPA it is possible to create a closed circulation system which prevents any flammable gas from escaping into the environment. GPA is available in different materials for all pump tubes with 40 mm tube diameter.

Flow meter

Flow meter electronic FM

The flow meter type FM is used to measure the volume of thin, low viscosity liquids. It can be mounted onto a drum pump or integrated into the pipeline.

The measuring principle is based on a radial turbine impeller. Because of the very low pressure losses it can be used with a very low pre-pressure. The pressure created when emptying a container is sufficient.

The measured value is transmitted sealless and contactless through magnets, so that there is a leakage-free separation between the wet and the dry area.

The conversion of the measured value is done through an electronic part with a display on it. Power is provided by extra long life lithium-batteries (service life 5 years).

The display is clear and readable and has two lines. The first big line (12 mm figures,

6-digit) shows the topical datas in litre. The second smaller line (6 mm figures, 6-digit) shows the total volume or a user-orientated partial-sum.

The clear foil-keyboard is easy to handle.

The display housing can be rotated in 90° steps.

Easy calibration regarding to the liquid.

For processing of measured values the flow meter can be fitted with an impulse-adapt-er.

For different liquids there are different materials.

POM

for diesel oil, fuel oil, anti-freeze and other neutral liquids

PP

for acids and caustics

PVDF

for highly aggressive acids, caustics and solvents

Flow meter

Flow meter electronic EDM
Explosion-proof EEx ia IIC T6

The flow meter type EDM is used to measure the volume of thin, low viscosity and also inflammable liquids. It is mainly designed to integrate into a pipeline or hoseline.

The measuring principle is based on an axial turbine impeller. Because of the very low pressure losses it can be used with a very low pre-pressure.

The measured value is transmitted sealless and contactless through magnets, so that there is a leakage-free separation between the wet and the dry area.

The conversion of the measured value is done through an electronic part with a display on it. Power is provided by extra long life lithium power cells (service life up to 4.000 hours).

Nylon

for neutral liquids

The display shows a resetable batch total and a non-resetable cumulative total.

Easy calibration regarding to the liquid.

For processing of measured values the flow meter can be fitted with an impulse-adapter.

For different liquids there are different materials.
